

PHASE 2 – REQUIREMENT ANALYSIS PHASE

Project Title

Implement Client Script & UI Policy (Incident)

Objective

The objective of this phase is to identify and analyze the requirements needed to implement Client Scripts and UI Policies on the Incident form in ServiceNow.

Functional Requirements

The project should provide the following functionalities:

- Configure Client Scripts for the Incident table.
- Configure UI Policies for the Incident form.
- Dynamically control Incident form fields.
- Make specific fields mandatory when required.
- Make specific fields visible or hidden based on conditions.
- Make specific fields read-only when required.
- Validate information entered by users.
- Apply the required field behavior without manually refreshing the form.

User Requirements

The user should be able to:

- Create and update Incident records.
- Enter the required Incident information.
- View fields based on the configured conditions.
- Identify mandatory fields easily.
- Submit the Incident only after providing the required information.

Technical Requirements

Platform: ServiceNow

Application: Incident Management

Table: Incident

Configuration Components:

- Client Script
- UI Policy
- UI Policy Action
- JavaScript

Client Script Requirements

Client Scripts should be configured to perform actions on the Incident form based on user interaction or form events.

The required script type may include:

- OnLoad
- OnChange
- OnSubmit

The appropriate script type will be selected according to the specific project requirement.

UI Policy Requirements

UI Policies should be configured to control Incident form fields based on predefined conditions.

UI Policy Actions can be used to:

- Make a field mandatory.
- Make a field visible.
- Make a field read-only.

Expected Outcome

The requirement analysis establishes all the functional and technical requirements needed for the project. The identified requirements will be used in the next phase to design the Client Script and UI Policy configuration for the Incident form.

Conclusion

The requirement analysis phase defines what the Implement Client Script & UI Policy (Incident) project needs to accomplish. These requirements provide a clear foundation for designing, developing, and testing the Incident form configuration.
