

PHASE 3 – PROJECT DESIGN PHASE

Project Title

Implement Client Script & UI Policy (Incident)

Objective

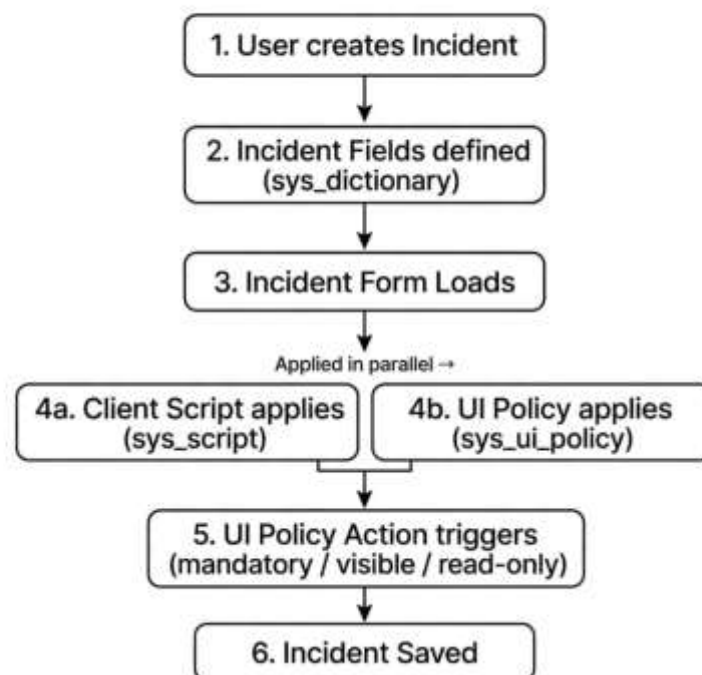

The objective of this phase is to design the Incident form configuration using Client Scripts and UI Policies to dynamically control field behavior and improve the efficiency and usability of Incident Management.

Design Flow

Incident → Open Incident Form → Select/Enter Incident Details → Condition Evaluation → Client Script / UI Policy Execution → Field Behavior Changes → Validate Information → Submit Incident Client Script Design

Flow Chart

Incident — Client Script & UI Policy Simple Flow

Script Type:

OnChange / OnLoad / OnSubmit

Application: Global

Table:

Incident

Purpose:

To dynamically perform actions on Incident form fields based on user input or form conditions. UI Policy Design

UI Policy Name: Incident
Field Control

Table:

Incident

Condition:

Based on the selected Incident field values

UI Policy Actions:

- Make field Mandatory
- Make field Visible
- Make field Read-only

Solution

The designed solution uses Client Scripts and UI Policies to control the behavior of fields on the Incident form. When the specified conditions are satisfied, the configured Client Script or UI Policy automatically performs the required action. This reduces unnecessary manual work and helps users enter the required Incident information correctly.

Expected Outcome

The designed Incident form provides a clear and dynamic user experience. Required fields can be controlled based on conditions, while unnecessary fields can be hidden or made readonly when required.

Phase Conclusion

The project design establishes the structure and behavior required to implement Client Scripts and UI Policies on the Incident form. This design provides the foundation for the development and testing phases of the project.
