Maximum Marks	4 Marks

Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

• I need to enter Incident details correctly.

SAYS

• Important fields should be clearly indicated.

• I want the Incident form to be easy to use.

• I should not miss any required information.

THINKS

• Some fields should be automatically controlled based on conditions.

• The form should prevent incorrect data entry.

**PERSONA
NAME**
*(Role / User
Type)*

DOES

- Creates and updates Incident records.
- Enters Incident details and submits the form.
- Checks and updates required information before resolving an Incident.

FEELS

- Checks and updates required information before resolving an Incident.
- Confused when unnecessary fields are displayed.
- Concerned about entering incorrect Incident information.
