

Problem-Solution Fit

Date	30 September 2026
Team ID	SWTID-2026-5283
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Problem-Solution Fit Canvas:

Use the framework below to ensure your proposed solution accurately addresses the root causes, behaviors, and limitations of your target audience. Fill out the canvas in the respective boxes just like the original visual template.

1. CUSTOMER SEGMENT(S) [CS] - ServiceNow service desk agents / ITIL users who log and resolve incidents - End users (callers) who raise incidents - ServiceNow admins and developers who maintain the Incident form	6. CUSTOMER LIMITATIONS [CL] EG. BUDGET, DEVICES • Limited budget: no paid add-ons, works on the standard platform - Users work on browsers, desktop and mobile - Limited scripting skills; cannot change the form for every case - Must follow ITIL process and company policy	5. AVAILABLE SOLUTIONS [AS] PROS & CONS - Manual checks by agents - simple, but slow and often missed - Business Rules only - reliable, but the user sees errors only after saving - Third-party form plugins - flexible, but costly and harder to maintain
2. PROBLEMS / PAINS [PR] + ITS FREQUENCY - Incidents saved with missing or wrong fields (daily) - Close notes / resolution details skipped (frequent) - Agents see irrelevant fields and make mistakes (daily) - Wrong priority or category chosen (frequent)	9. PROBLEM ROOT / CAUSE [RC] - The Incident form has no client-side validation or dynamic field control - Fields are not mandatory, hidden or read-only based on State, Category or Priority - Errors are caught only after submission, or never	7. BEHAVIOR [BE] + ITS INTENSITY - Agents rush to log and close tickets and skip optional fields (high) - Users re-open or edit records to fix data (medium) - Managers manually chase incomplete records (medium)
3. TRIGGERS TO ACT [TR] - Poor incident data quality and rework - Breached SLAs and slow resolution - Audit or management requests for complete records	10. YOUR SOLUTION [SL] UI Policy: make Close notes / Close code mandatory and visible when State = Resolved or Closed; make Caller and Short description mandatory; hide or lock fields by State and Category	8. CHANNELS OF BEHAVIOR [CH] ONLINE - ServiceNow Incident form in the browser - Service Portal / mobile app - Email notifications on incident updates

4. EMOTIONS BEFORE / AFTER [EM]

- **Before:** frustrated, confused, stressed by rework
- **After:** confident, in control, satisfied

- **Client Script:** onLoad shows a banner for P1 incidents; onChange of Category clears Subcategory and guides Priority; onSubmit blocks the save with a clear message when required data is missing
- Instant feedback on the form, with no page reload or server round trip
- Tested in a Personal Developer Instance and moved by Update Set
- Result: complete, consistent incident records and faster, cleaner resolution

OFFLINE

- Service desk calls and walk-ups, logged by the agent
- Team stand-ups and process meetings
- Shift handover notes
